It is not right to restrict XM radio from offering traffic and weather and other services. We pay for the right to use the satellite. Why should government put a restriction on what channels we get if we, as consumers, are paying for the services. We get taxed enough and have enough restrictions with any and all services. This needs to stop. Please oppose HR 4026. Consumers pay enough for anything they purchase, especially in services, please don't restrict our information services!
